Knowledge

- 30+ years as Developer
- C++, **Java**, Groovy, PHP
- **Javascript**, TypeScript, NodeJS, Vue
- Maven, **Gradle**
- Git (GitHub, Gitlab, BB)
- **PostgreSQL**, MySQL, CosmosDB
- **Kafka**, RabbitMQ, SQS
- **Docker**, **Kubernetes**
- **AWS**, Google Cloud, Azure
- AsciiDoctor

Business Areas

- Retail
- Banking
- eInvoice
- Bioinformatic

OpenSource Projects

- K8s Caos Operator
- Gradle extensions
- Google DSL (Groovy)
- AsciiDoctor Extensions
- ...

Publications

101-groovy-scripts blog

Author of eBook "Tutorial Básico de AsciiDoctor"

Active member of MadridGuG, Codemotion and esLibre

Speaker at ApacheConf

Education

- 2020 Degree in Data Science (in course)
- 2009-2019 Degree in Computer Engineering (UOC)

Languages

- Spanish (native)
- English

PRINCIPAL SOFTWARE ARCHITECT

Accomplished Software Architect and Technical Leader with over 30 years of experience driving innovation across diverse industries. Proven track record of leading digital transformations, migrating complex monoliths to scalable microservices, and mentoring high-performance teams. Expert in the JVM ecosystem (Java, Groovy, Micronaut, Quarkus) and modern cloud-native infrastructures (AWS, K8s, Terraform).

Active contributor to the tech community as a frequent speaker at international conferences like ApacheConf and Codemotion.

- **Languages:** Java, Groovy, C, JavaScript (ES6+), Kotlin.
- **Frameworks:** Spring Boot/Batch/Integration, Micronaut, Quarkus, Grails, Vue.js.
- **Cloud & DevOps:** AWS, GCP, Kubernetes, Docker, Terraform, Prometheus.
- **Architecture:** SOA, REST, GraphQL, BFF (Backend for Frontend), Event-Driven (RabbitMQ/Kafka).

Professional experience

Software Architect at Incremental Steps (2024)

- Leveraged Terraform to design a resilient cloud environment optimized for AI services, allowing an international travel agency to automate customer insights and dynamic pricing through scalable ML pipelines.
- Spearheaded digital transformation initiatives for enterprise clients, transitioning legacy monolithic systems to modern microservices architectures while enforcing Clean Code and robust Code Review standards.

Software Architect & DevOps Lead Baraka (Investment US Stock) Dec 2022 – Jan 2024

Context: Led the infrastructure evolution for a US-based stock investment platform, moving from a rigid container setup to a scalable orchestration model.

- **Cloud Migration:** Orchestrated the end-to-end migration of a NodeJS ecosystem from AWS ECS to a Kubernetes-based microservices architecture, increasing system resilience and deployment frequency.
- **API Management:** Designed and implemented a robust APISIX API Gateway layer to centralize authentication, authorization, and intelligent request routing.
- **Infrastructure as Code (IaC):** Automated the deployment and monitoring stack (Prometheus, OpenSearch) using Terraform, reducing environment setup time and improving observability.

Senior Software Engineer at Seqera (Biotech company) Nov 2021, Dec 2022

- Contributed to Nextflow, the leading open-source workflow orchestration engine for bioinformatics. Enhanced the DSL with new features and actively supported the global open-source community.

Principal Software Architect | Tymit (UK FinTech) March 2020, Nov 2021

Context: Acted as the technical authority for a high-growth FinTech, overseeing the transition from a monolithic core to a distributed Backend-for-Frontend (BFF) model.

- **Architecture Evolution:** Defined the roadmap and led the execution of a Monolith-to-Microservices migration, utilizing Grails and Quarkus to optimize performance.
- **BFF Implementation:** Engineered a new Backend-for-Frontend (BFF) service layer, streamlining the communication between mobile clients and core services, which improved mobile app load times and API consistency.
- **Cross-Team Leadership:** Bridged the gap between product requirements and technical execution, collaborating closely with mobile and backend teams to align API contracts and delivery timelines.

Software Architect in B2Boost (2018) eInvoice company

- Enhanced development methodologies and system design within a multidisciplinary team. Architected microservices using Grails and Angular, while coordinating technical tasks and developing core features

Software Engineer at Enxendra (2016) eInvoice company

- Led the architectural evolution from a monolith to microservices using Spring Boot and Groovy/Grails without service disruption.
- Designed and implemented the SII (Immediate Supply of Information) solution, handling millions of daily invoices for the AEAT via Spring Integration and RabbitMQ

Software Consultant at Puravida Software (2010)

- Offering my services as Software Consultant to many different customers

Co-founder EDN partner of NCR

- For 12 years, I led various teams of developers in different projects of varied characteristics in the banking area for NCR (ATM, Batch transactions, ...)
